

The **University of Maryland Rehabilitation & Orthopaedic Institute** offers a comprehensive, interdisciplinary and individualized **Stroke Rehabilitation Program**, designed to help your loved one maximize their potential based on their diagnosis and goals. Here, we focus on ability rather than disability, applying evidence based-care and state-of-the-art technology to each treatment plan so that your loved one can ultimately accomplish milestones that were once considered impossible.

Our Stroke Rehabilitation Program is led by a team of physicians, therapists and other specialists who focus exclusively on caring for patients who have experienced a stroke. We are committed to meeting the physical, psychological and emotional needs of your loved one through a continuum of care that is evident from the moment you arrive until well beyond your departure. Our team collaborates with local primary care physicians to assure that your family has ongoing access to information, resources, tools and support on the journey of recovery.

**A NUMBER OF QUALITIES SET OUR PROGRAM APART FROM OTHERS IN THE LOCAL AREA:**

1. Patients who choose **inpatient rehabilitation** following a stroke have significantly better long-term outcomes.
2. Our team focuses exclusively on **stroke rehabilitation**. We have the knowledge and skills to maximize each patient's recovery potential.
3. We believe in a **high-tech/high-touch** approach to care. We have made significant investments in technology to assist our patients as they recover, while promoting the value of hands-on and individualized patient care.
4. We encourage **family participation** and are dedicated to educating and supporting family members whose lives are impacted by their loved one's medical needs.
5. As a partner with the University of Maryland School of Medicine, we are actively involved in **research** and capable of offering patients **clinical trial** opportunities that may not be available at other local hospitals.
